

How to cookie cut DXF data

Sitemap Customised DXF

Cookie Cutting

- (1) The vector data file format for 'Sitemap Customised' is DXF for use in CAD software
- (2) While in 'Area of Interest' mode, there is the choice of single or multiple site selections (multiple areas of interest).
- (3) There is now the facility to 'cookie cut' (exactly specify) areas of DXF data – Area of Interests (AOI) no longer need to be square or rectangle shape.
- (4) Click on the parts of the map you want for a cookie-cut area, the process is identical to that used when drawing a polygon in 'Extra Info'.
